Experience

SupplyPike - Software Engineer
April 2017 - Present | Fayetteville, AR

- ➢ SupplyPike is a web platform where many different types of users can collaboratively manage all parts of a supply chain.
- Worked within a team applying Agile methods to rapidly iterate on an analytics solution for CPG companies.
- Used technologies like React, Relay, and GraphQL to deliver a snappy and satisfying user experience.
- Developed and deployed microservices to AWS infrastructure using Docker and Kubernetes.
- Collaborated with other product teams to provide dependable microservices used within their portion of the platform.

Feather - CTO and Co-founder
August 2015 - March 2017 | Fayetteville, AR

- ➢ Feather is a venture-backed software startup that connects families & seniors to independent caregivers through joinfeather.com.
- Designed, developed, and launched Feather in partnership with Hayseed Ventures, growing to thousands of users across the country.
- Led a team of developers in continuously integrating features to support the business using Agile methods.
- Managed infrastructure and implemented tools for rapid deployment of features and fixes to staging and production servers.
- Created a billing solution that leveraged Braintree to securely and transparently pay out to multiple parties, complete with automated transactional emails.

Care Current, Inc. - CTO and Co-founder
May 2015 - August 2015 | Memphis, TN

- ➢ Care Current develops and customizes software for long-term care providers.
- Participated in StartCo's 100-day startup accelerator program for intense training and mentorship in customer discovery, product development, go-to-market strategy, along with securing $25,000 in seed funding.
- Designed and developed software and business processes to help organizations track patients throughout the continuum of care to provide better quality of care and reduce hospital readmission.
